

Duo MultiFactor Authentication (MFA)

Verify the identity of all users with strong two-factor authentication — before granting access to corporate applications to protect against phishing and other access threats.

Easy for Every User

- Duo's wide variety of authentication methods make it easy for every user to securely and quickly log in. Duo Push, sent by our Duo Mobile authentication app, allows users to approve push notifications to verify their identity.

We also support Universal 2nd Factor (U2F) security tokens, hardware tokens, mobile passcodes, SMS, phone callback and biometrics like Touch ID to provide flexible and accessible options for all types of users — from clinicians to third-party contractors.
