

# Profile and Protect

Profile and Protect provides information to help you determine the most efficient security strategy for your Network.

Before deploying random security tools, you need to understand what your needs are. SystemsNet's Profile and Protect scans your network environment to identify security gaps and provide information to help you determine the most efficient security strategy for your company. The solution combines intelligent profiling and alerting technology with support from our Security Operations Center (SOC), which empowers SMB's to build and enforce end-to-end security policies.

With advanced profiling, risk scoring and identification of gaps in coverage, you can quickly shine a light on security issues within your network.

## How We Do It Better

● ENDPOINT AND USER ACCOUNT REPORTING

● COMPLIANCE TECHNICAL REQUIREMENTS MADE EASY

● CLEAR INSIGHT INTO SECURITY GAPS

● SMARTER ALERTS, FEWER TICKETS

## KEY BENEFITS

### ADDRESS SECURITY GAPS BASED ON BEST PRACTICES

No two companies are the same but your approach to build out a security program to meet your needs should be based on known, proven best practices that can scale to meet the needs of your business

### BE ALERT READY VS ALERT FATIGUED

The right security that is always on watch filters out the noise and informs you on only the alerts that need to be actioned. This allows you to focus more energy on growing your business vs chasing ghosts in the machine.

### SECURITY AND COMPLIANCE AS A GROWTH DRIVER

Being compliant has moved beyond a checkbox and is now something that drives business. When implemented right, SMBs can realize that achieving compliance is not a burden but an opportunity.

## Key Features

### CUSTOMIZED SECURITY PROFILES

Reduce the data noise and focus on what really matters to identify technical gaps in your network environment.

### RISK SCORING AND ALERT THRESHOLDS

The risk score helps you identify protection gaps and how they impact the device's vulnerability to threats you're trying to protect against. You can then customize alert thresholds to articulate acceptable risk on a per-device basis, and tickets are only generated when a risk score exceeds its threshold, eliminating much of the clutter and white noise found in other solutions.

### ADVANCED REPORTING FOR COMPLIANCE

Guidance through regulation technical requirements, exposing security configuration gaps against policies and providing solutions to address each issue.

### WEBROOT SECURE ANYWHERE® DNS PROTECTION

Equip your end-client environment with this advanced DNS protection. Featuring more than 80 URL categories, it provides greater visibility over endpoint connections, reduces risk and tailor's usage policies for each SMB's unique needs.

### WEBROOT® SECURITY AWARENESS TRAINING

Comprehensive training courses designed to educate your customers about security threats and how to avoid them on an ongoing basis.
